

Precision Tool

How to Use

The Precision tool is used for exact placement and alignment of props. Instead of eyeballing position and angle, it lets you attach, rotate, and align props with precise measurements - perfect for tidy, professional-looking builds.

Hold **Q** and select the **Precision** tool from the list on the right. Use the tool menu to pick what you want to do (align, weld, rotate, position), then click your props to apply it. Because everything snaps to exact values, it's ideal for lining up fading doors, keypads, and props that need to sit flush against each other.
