Terminal & Camera

How to Use

The Camera and Terminal work together to let you watch over your base remotely. Cameras are placed around your property to cover entrances, hallways, and blind spots, while the Terminal acts as the screen that lets you view what the camera sees.

To use them, buy and place your Camera in the spots you want to watch, then place a Terminal somewhere safe inside your base - usually your back room. Press **E** on the Terminal to bring up the camera feed to keep an eye on raiders.

This is great for spotting people approaching your base early and reacting before they reach your entrance. Remember that cameras still count as base entities, so they must follow all normal basing and prop rules.
